

AiEO Visibility Challenge Stage 2

Technation Canada

Team: AI Accuracy
Benonia, Chandhu, Maria, Srivani
Date: 22-Mar-2026

Early Insights from Stage 1:

- ❖ Most visible: Government health, education, and major employment programs.
- ❖ Least visible: Small regional NGOs, emerging tech initiatives.
- ❖ Models perform strongest in Newfoundland and Labrador and New Brunswick (~75–80%), while performance drops significantly in Ontario and Manitoba (below 50%), with all models also showing weaker results in Yukon.

Challenges:

- ❖ Misinformation patterns: Often due to outdated and the limited availability of AI training data.
- ❖ Improving AI representation supports fairness, access, and equitable knowledge distribution across Canadian organizations, sectors, communities, and programs.

Model-Wise Official Government Data

❖ Stage 2 Proposed Solution:

- Policy Suggestion
- Architectural Framework
- Custom Tool

3 - Tiered Solution

01 Policy Suggestion

- ❖ Prioritize redirecting Govt-related questions to official federal/provincial websites.
- ❖ Ensures: accuracy, reliability, latest information

02 Architectural Framework

- ❖ Custom layered LLM architecture trained on verified government datasets.
- ❖ Conversational interface delivers structured, trustworthy responses.
- ❖ Ensures: real-time retrieval, clarity, transparency

03 Custom Tool

- ❖ Stage 1 dataset fine-tuned into a custom LLM.
- ❖ Live responses from provincial/federal verified data.
- ❖ Ensures: improved accuracy, representation, and accessibility.

Sample Tool Hands-On Demonstration

[Demo Tool](#)

Potential Impact

- ❖ Improves Accuracy & Reliability
 - Reduces misinformation from outdated, biased, or incomplete data by prioritizing verified government sources.
- ❖ Ensures Fair Visibility
 - Prevents government programs from being deprioritized while elevating smaller NGOs, Indigenous programs, and regional initiatives.
- ❖ Strengthens Access & Equity
 - Enhances public trust, access to services, and supports digital equity across Canada.
